PWgen | Day 5

PW = " " # EMPTY STR.
Range (1, nr-s r1) J - list
                              append ()
                              Random ()
                              .choice ()

input

(* CHECK Random ()
     documentation

EASY:

FOR char in Range (1, nr-letters r1):
    pw r= Random. choice (letters)

HARD:

  pw-list = []
FOR char in Range (1, nr-letters r1):
    pw-list. append (Random. choice (letters))

add to   choose random letter
list   in list

random. shuffle (pw- list)

SHUFFLE THE LIST

FOR char in pw-list:
    pw r= char
